ABSTRACT

Based upon annual reporting data for FY 76, this statistical report was designed to facilitate rapid comparison of support and activity levels among Massachusetts public libraries. The first section presents summary tables providing means, medians, and percentile values by population group for each of the following indicators: (1) library expenditures as percent of total municipal expenditures; (2) total income per capita; (3) municipal appropriations per capita; (4) total operating expenditures per capita; (5) salary expenditures per capita; (6) salary expenditures as percent of total expenditures; (7) materials expenditures per capita; (8) materials expenditures as percent of total expenditures; (9) print holdings per capita; (10) nonprint holdings per capita; (11) circulation of print materials per capita; and (12) circulation of nonprint materials per capita. In the second section, individual municipalities are listed in tables by population groups to increase comparability of per capita and percentile figures for the above indicators. (JPF)

Population Group VII (100,000 +).....45

INTRODUCTION

This statistical report is designed to facilitate the rapid comparison of FY 1976 support and activity levels among public libraries. Using annual report data for the fiscal year ending June 30, 1976, indicators of library support and activity are identified and percentage and per capita figures are computed for each municipality to increase comparability.

For municipalities containing more than one library system receiving public funds, these figures reflect the combined levels of library support and activity within that municipality. Municipal support for library service generally, not for specific libraries, is important for comparative purposes. Therefore, we do not prepare displays for individual libraries in multi-library cities or towns.

The municipal tables comprising the second section of the report contain data for the individual municipalities arranged in seven population groups based on the 1975 state census. New this year is the inclusion of the population figure below the name of each municipality. Please note that the use of 1975 state population figures requires that some municipalities be listed in a different population group than last year when 1970 federal population census figures were used.

Section one is comprised of 12 summary tables displaying the mean (average), median and the 10th, 25th, 75th, and 90th percentile values for each indicator within population groups I through VI. Because of the small number of municipalities with populations in excess of 100,000 (population group VII), means, medians, and percentiles are superfluous for that group and are not computed. Data for population group VII municipalities appear in the municipal tables only.

The sequence in which the indicators appear on the municipal and summary tables is rearranged as follows to facilitate reading the report:

A. Library expenditures as percent of total municipal expenditures.
B. Total income per capita.
C. Municipal appropriation per capita.
D. Total operating expenditure per capita.
E. Salary expenditure per capita.

F. Salary expenditure as percent of total expenditures.
G. Materials expenditure per capita.
H. Materials expenditure as percent of total expenditures.
I. Print holdings per capita.
J. Non-print holdings per capita.
K. Circulation of print materials, per capita.
L. Circulation of non-print materials, per capita.

Library expenditures as a Percent of Total Municipal Expenditures is added this year as another indicator (A) of library support. All other indicators (B - L) are comparable to those used in the FY 1975 report. Our original intention in sending out the 1976 Supplementary Questionnaire on Municipal Funding of Public Libraries in Relation to Total Public Library Services was to compute library appropriation as a percent of total municipal appropriations. While response was good, interpretation of the questions varied considerably and prohibited us from using the questionnaire results. Since it was not feasible to redesign the questionnaire to clearly isolate appropriations, and tabulate the results in time for inclusion in this report, we decided instead to compute library expenditures as a percent of total municipal expenditures, also a viable indicator of library support.

Fortunately, we were able to locate useful data in the Report of Financial Transactions, Schedule A. This report is completed annually by each municipality and was made available to us by the Massachusetts Department of Corporations and Taxation, Bureau of Accounts. As reported in Schedule A, the expenses and federal revenue sharing funds (excluding capital outlays) of all departmental payments were totalled and divided by the total library expenses and federal revenue sharing funds, excluding capital outlays. In those cases where a municipality had not yet submitted a FY 1976 Scedule A, no information is reported on library expenditures as a percent of total municipal expenditures for that municipality.

As we look toward preparing Data for Massachusetts, FY 1977. Comparative Public Library Report, we encourage comments from the public library community regarding the usefulness of this year's report and suggestions for the improvement of statistical reporting procedures.

USAGE NOTES

The statistical measures[1] applied to each indicator of library support and activity in the Summary Tables are:

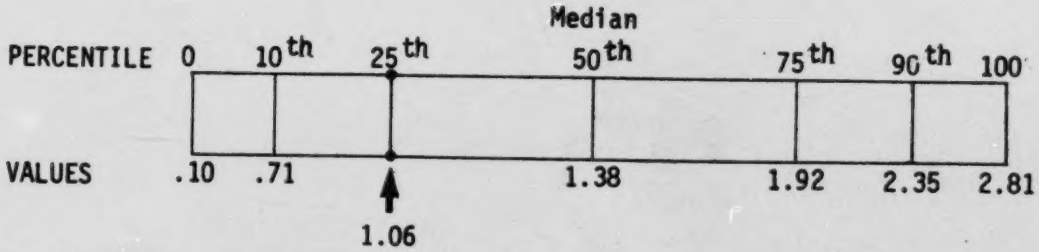
The Mean — commonly termed the "average;" is equal to the sum of the values of the indicator divided by the number of values.

The Percentile Rank — describes the position of a value in its distribution; indicates the percent of values in the distribution falling at or below a particular value.

The Median — the popular term for the 50th percentile; is equal to that value of an indicator above which 50% of the values fall and below which 50% of the values fall. The value of the median differs from the value of the mean when the distribution of the values of an indicator is not regular, but rather skewed or piled at either end of the range. When there is considerable difference between the median and the mean, the median is generally thought of as being the more valid measure of central tendency.

Constructed below are hypothetical library situations designed to illustrate how the Summary Tables may be used to compare your municipality with those in your population group or in other population groups.

* In some cases the value of a statistical measure may correspond exactly to the values shown on the Summary Table, for example:



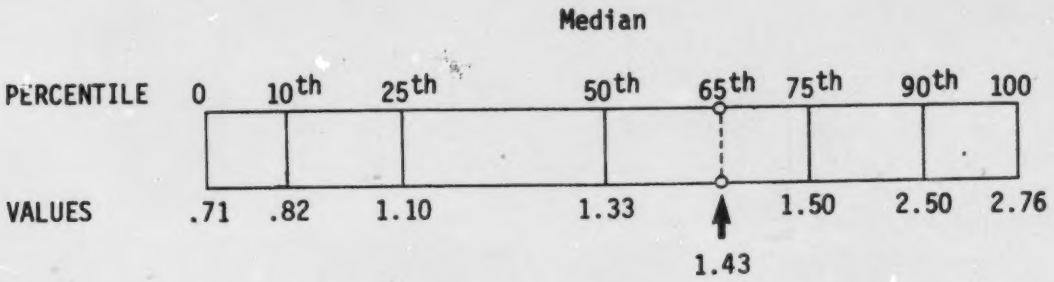
[1] Definitions are adapted from Janet T. Spence, et. al., Elementary Statistics, 2nd edition. Englewood Cliffs, New Jersey: Prentice-Hall, 1968. pp. 23, 33, 40.

The municipal tables show that for a library in a hypothetical municipality in the 25,000 to 49,999 population group (group V), library expenditures are 1.06% of total municipal expenditures.

From Summary Table A, we see that 1.06% corresponds to the value of the 25th percentile for this indicator in population group V.

We may say, therefore, that when comparing our hypothetical municipality with those in its population group, in 25% of the municipalities library expenditures account for an equal or lesser percentage of total municipal expenditures, and in 75% of the municipalities library expenditures account for a greater percentage of total municipal expenditures.

* In other instances, the value of an indicator may fall between the values of a statistical measure, for example, between the median (50th percentile) and the 75th percentile:

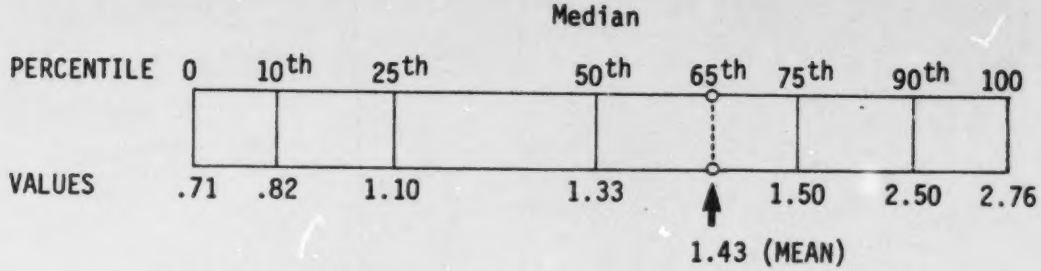


For a library in a municipality in the 50,000 to 99,999 population group (group VI), library expenditures are 1.43% of total municipal expenditures.

From Summary Table A, we see that 1.43% falls between the values of the median (1.33%) and the 75th percentile (1.50%).

We may say, therefore, that for our hypothetical municipality, library expenditures account for a greater percent of total municipal expenditures than they do in 65% of the municipalities in this population group.

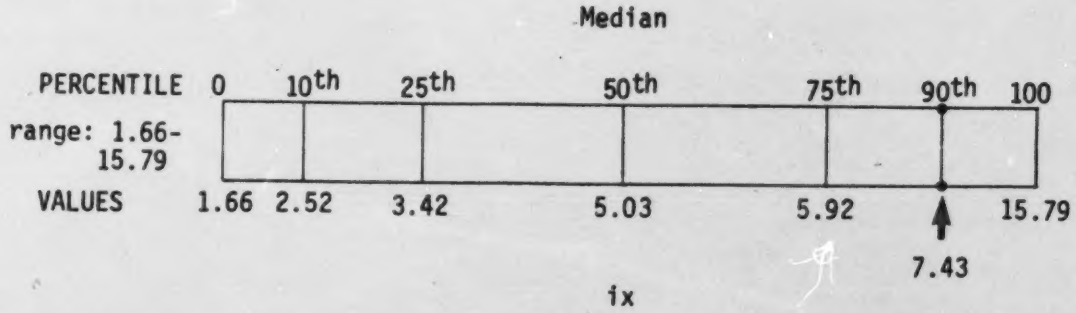
* For each indicator it is most useful to review the results of the statistical measures in conjunction with one another:



Another look at Summary Table A for the library mentioned in the above example indicates that the value of library expenditures as a percent of total municipal expenditures (1.43%) not only falls between the median (50th percentile) (1.33%) and the 75th percentile (1.50%), but also corresponds to the mean (1.43%).

Therefore, while we may say that library expenditures as a percent of total municipal expenditures are equal to the "average" for this population group, it remains true that for our hypothetical municipality, library expenditures account for a greater percent of total municipal expenditures than they do in 65% of the municipalities in this population group.

* In some cases, percentile values may be used effectively to qualify the minimal information provided by the range of values for an indicator and population group, for example:



A library in a municipality in the 2,000 to 4,999 population group (group II) holds 7.43 print volumes per capita.

From Summary Table I, we see that 7.43 equals the value of the 90th percentile (7.43) and falls approximately half way between the range of volumes held per capita (1.66 through 15.79) by all libraries in this population group.

We may say, therefore, that even though the hypothetical library holds less than half as many volumes per capita as the library with the highest value in the population group (15.79), it still holds as many or more volumes per capita than 90% of the libraries in this population group.
